## Response to Amendment

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-5, 9-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burdon et al.(U.S.Pat.6,572,830) in view of Brown et al.(U.S.Pat.6,765,535). Burdon discloses an integrated multilayered microfludic devices nad methods of making the same that shows all the features of the claimed invention but fails to explicitly show an array comprised of wafers. Brown discloses a monolithic millimeter wave reflect array system that shows a reflection system that redirects waves and uses an antenna array. It would have been obvious to one of ordinary skill top combine the features of Brown with the device of Burden so as to provide a coherent wave front and a high power density.

Claims 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burdon et al. (U.S.Pat.6,572,830) in view of Brown et al. (U.S.Pat.6,765,535) as applied to claims 1-5 and 9-19 above, and further in view of Dion et al. (U.S.Pat.5,101,086). Burdon et al. (U.S.Pat.6,572,830) in view of Brown et al. (U.S.Pat.6,765,535) does not explicitly show a surface sensor. Dion discloses an electromagnetic inductor with ferrite

Art Unit: 3742

core for heating electrically conductive material that explicitly shows a surface sensor. It would have been obvious to one of ordinary skill to use a surface sensor to create a patterned temperature profile.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Geisler, Bridges andf Moore are cite dto show structure similar to the claimed invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel I. Robinson whose telephone number is 571-272-4788. The examiner can normally be reached on M-F 5:30am-2:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robin Evans can be reached on 571-272-4777. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
